

Milan, 7th September 2022

Dear Sirs,

Following your enquiry regarding the safety of the use of Guna Collagen Medical Devices in oncologic patients, and namely the possible risks related to the presence of prions in our products, we would like to inform you that the collagen contained in the Guna Collagen Medical Devices undergoes a process of viral inactivation.

In over 12 years of presence on the market and administration to millions of patients worldwide, no report of Spongiform Encephalopathies nor other prion-related diseases has ever been reported to the Pharmacovigilance system.

Regards

Leonello Milani, MD, PhD

Medical Director

GUNA Spa
